*Windows PC Health Tune-up/Backup Assessment Special - \$89*

*Work is done remotely and securely over the Internet and phone*

We perform most of the OS-intervention activities as recommended by Microsoft in article, <http://windows.microsoft.com/en-us/windows/optimize-windows-better-performance#optimize-windows-better-performance=windows-7>.<sup>1</sup>, including:

- defragmenting your hard drive
- cleaning the hard drive of unnecessary system and temporary files
- removing unwanted programs/services from startup
- deleting unwanted programs from the computer
- making sure you have viable anti-virus and malware applications, that their databases are updated and running them<sup>2</sup>

Additionally, we:

- 1) schedule your system drive to run a chkdisk at next bootup. This repairs any errors at the filesystem level, and contributes to performance improvement as well as possibly dislodging some malware/anti-virus nested activity.
- 2) troubleshoot more coarse (obvious) performance issues and attempt to fix them.
- 3) ask you about your backup methodology: if it works for you, what doesn't work for you, and make recommendations.
- 4) if we observe a more granular or alarming problem or you alert us to something that is not right, we'll offer constructive guidance on the issue and offer to fix (extra charges may apply).<sup>3</sup>

<sup>1</sup> No hardware is replaced. Only software administrative activities are performed. OS must be Windows 7 or higher. Windows XP or earlier not included in this special.

<sup>2</sup> You must purchase and have on hand a viable anti-virus and malware application for work to proceed. We can make recommendations.

<sup>3</sup> New charges apply to resolving additional or discovered issues. Free estimates are given.
